

***ENVIRONMENT, ENERGY, HEALTH AND SAFETY INTEGRATED  
MANAGEMENT SYSTEM POLICY***

Metalfusioni Management has decided to pursue the continuous improvement of the environmental and energy performances, as well as of the health and safety system processes in order to reduce the impact on the environment over time, pursue energy efficiency and improve the working conditions of the employees; consequently, to confirm its commitment to establishing and maintaining an integrated management system across all the organization's processes, it signs the following Policy for the environment, energy, health and safety, and communicates it to all interested parties:

“The environment safeguarde, the energy efficient use and the health and safety workers protection are an integral part of all Metalfusioni processes including products and services purchasing; the system continuous improvement commitment is achieved by establishing and periodically reviewing objectives and targets and implementing management programs and preventive actions.

In order to pursue the integrated system objectives, Metalfusioni provides all the necessary information and resources.

Metalfusioni supports long-term sustainable development, and consequently pursues an efficient use of energy and natural resources, promotes materials recovery and recycling systems, acts in order to prevent and minimize pollution.

Metalfusioni promotes the development of a safe environment and working conditions, through health and safety risks control procedures, so that all workers can act effectively, take responsibility and achieve their professional and personal goals, also through the commitment to participation and consultation of workers.

Metalfusioni undertakes to comply, if not exceed, all applicable environmental, energy and worker health and safety requirements, paying particular attention to the requirements and standards established at international level”.
